# NLU Redesign

---

# The Target user

- The target majority is Students/Professors
- The Goal is to make the NLU app/Website fully compatible and easier to navigate, so users don't have to struggle with issues anymore.

# The Problem

- Students and Professors have issues that affect their experience on NLU
- Based on our analysis, we asked students about their experiences with the NLU app/website. The majority agreed to our questions

# The Future State

- We would have a group of staff members that will do separate things, like debugging the website/app. We would make sure to have things recoded because overall the design does not look organized. We have workers fully recode the app and website to make sure everything is stable last but not least small and big updates for the future so the app and websites could stay stable.

# System Capabilities

- We are going to have an Artificial Intelligence in the bottom corner on the NLU app and it will say "you got a question ask me what's your issue and I may help."
- The App and the website will have both courses and are easy to access with just 1 touch or click.
- The login on both the website and the app is going to have cookies and it will save your information and you would not have to login by typing constantly.

# **Supporting the users**

- With having Artificial Intelligence built in the app it will help students navigate when more easier when there are confused on things they want to look for in the app just having a full remodel of the app and using AI will improve the NLU app so much.
